SRS for Hostel management System

As the name specifies this software developed for managing various activities in the hostel. This particular project deals with the problems on managing a hostel and avoids the problems which occur when carried out manually.

✡ Compatible and user friendly.

✡ creates strong and secrete database that allows for any connection in secret way, to prevent any outside or inside attacks.

✡ Allows each student to reserve more than one room to the student.

✡ There will be pre-defined criteria's for the reserve to the hostels.

★ He (administrator/incharge of hostel) will check the applied forms of the student obtained from the internet and verify it with the student database.

✡ Even the student can check with all the facilities provided in hostel.

* If the student found eligible then they will be alloted to the hostel Room.

* There are mainly 4 modules exists in this system.

* Admistrator module can allot different students to the different hostels, controls the status of fee payment, etc

* User module allows different users to access the registration forms.

* Hostel module includes option for the room vacation and deletion of the particular record from the database.

* Registration module provides a form to the students which can be filled up by them, and a copy of the filled page can be taken in printed form.

* after this, submitted to the hostel author -ties can be verified by them before allowing them to the specific hostel Rooms.
